

**SEI certified, industrial and export packing
since 5 years division of TPL**

**READYBOX® *care for better seaworthy and industrial
packing service !***

Maritime packing remains the work of specialists and must be carried out in view to the further handling (eg.: by adding a steel beam for oversized and heavy cases, or a wooden cradle to load oog steel plates inside a 40ft HC . Readybox® has a wide massive experience, and is SEI licensed since 15 years. In Europe the demand for SEI certified packing is rising, because only a certified SEI-4C packing gives the written guarantee that the content is adequately protected against corrosion, and that the boxes can safely be stored outside during at least 1 year, without any risk.
